Improve energy efficiency and environmental compliance with acoustic monitoring of steam traps and pressure relief valves

Gain instant visibility to all of your critical steam traps and PRVs through a non-intrusive, WirelessHART® monitoring system

Know you are backed by Emerson’s proven experience in Smart Wireless field instrumentation and expert technical support
Emerson’s Smart Wireless Solution

IEC 62591 (WirelessHART)... The industry standard

Self-organizing, adaptive mesh routing
- No wireless expertise required; network automatically finds the best communication paths
- The self-organizing, self-healing network manages multiple communication paths for any given device. If an obstruction is introduced into the network, data will continue to flow because the device already has other established paths. The network will then lay in more communication paths as needed for that device.

Reliable wireless architecture
- Standard IEEE 802.15.4 radios
- 2.4 GHz ISM band sliced into 15 radio-channels
- Time Synchronized Channel Hopping to avoid interference from other radios, WiFi, and EMC sources and increase reliability
- Direct sequence spread spectrum (DSSS) technology delivers high reliability in challenging radio environment

Emerson’s Smart Wireless

Seamless integration to all existing host systems
- Native integration into DeltaV™ and Ovation is transparent and seamless
- Gateways interface with existing host systems using industry standard protocols including OPC, Modbus® TCP/IP, and Modbus RTU

Layered security keeps your network safe
- Ensures data transmissions are received only by the Smart Wireless Gateway
- Network devices implement industry standard Encryption, Authentication, Verification, Anti-Jamming, and Key Management
- Third party security verification including Achilles and FIPS197

SmartPower™ Solutions
Emerson SmartPower Solutions provide an intrinsically safe Power Module, allowing field replacements without removing the transmitter from the process, keeping personnel safe, and reducing maintenance costs.
Rosemount 708 Wireless Acoustic Transmitter

Ultrasonic acoustic event detection

- Reliably detects and transmits information about acoustic events such as leaks
- Transmitter output includes acoustic level (0 to 255 counts) and temperature (-40 to 550 °C)
- Transmitter communicates process variable and status information via the wireless network for integration into existing host systems

Monitor steam traps

- SteamLogic™ software provides critical, real-time information on the condition of your monitored steam trap population
- SteamLogic delivers immediate notification of a failed steam trap and its location
- Real-time monitoring provides instantaneous feedback for system maintenance and optimization

Monitor pressure relief valves or pressure safety valves

- Turbulence generated by a leaky valve can be detected using the acoustic transmitter
- Notification when release is occurring and when the release has stopped
- Emerson Smart Wireless network provides time stamped information to the host
- Automated data enables reporting of a tamper-proof data log

Mounting flexibility

The wireless acoustic transmitter can be directly mounted to process piping without cutting pipes or changing pipe configurations allowing for a flexible, easy installation.

Reliable transmitter performance

The rugged and robust design of the transmitter ensures reliable performance in harsh environments.

www.rosemount.com
Specifications

Functional specifications

Output
IEC 62591 (WirelessHART) 2.4 GHz DSSS

Humidity limits
0–100% relative humidity

Transmit rate
User selectable 1 second to 60 minutes

Radio frequency power output from antenna
Internal (WP option) antenna: Maximum of 10 mW (10 dBm) EIRP

Physical specifications

Material selection
Emerson provides a variety of Rosemount products with various product options and configurations including materials of construction that can be expected to perform well in a wide range of applications. The Rosemount product information presented is intended as a guide for the purchaser to make an appropriate selection for the application. It is the purchaser’s sole responsibility to make a careful analysis of all process parameters (such as all chemical components, temperature, pressure, flow rate, abrasives, contaminants, etc.), when specifying product materials, options, and components for the particular application. Emerson Process Management is not in a position to evaluate or guarantee the compatibility of the process fluid or other process parameters with the product options, configuration, or materials of construction selected.

Electrical connections/power module
- Replaceable, non-rechargeable, Intrinsically Safe Lithium-Thionyl Chloride power module pack with PBT/PC enclosure
- Ten-year power module life at reference conditions(1)

Field Communicator connections
Communication Terminals - Clips permanently fixed to power module

Materials of construction

Housing
PBT/PC

Cover O-ring
Silicone

Power module housing
PBT/PC

Wave guide
Machined 316L SST

Mounting
Transmitters are directly attached to process piping using two stainless steel mounting bands. High temperature mounting hardware should be used when process temperatures exceed 260 °C (500 °F).

Weight
708 with power module - 1.31 lbs. (0.595 kg)
708 without power module - 0.98 lbs. (0.445 kg)

Enclosure ratings
NEMA 4X and IP66/67

Performance specifications

Vibration effect
Tested per the requirements of IEC60770-1 field or pipeline with high vibration level (10-60 Hz 0.21 mm displacement peak amplitude/60-2000 Hz 3g).

Temperature limits
Ambient Limit -40 °C to 85 °C (-40 °F to 185 °F)
Storage Limit -40 °C to 85 °C (-40 °F to 185 °F)
Heat from the process is transferred to the transmitter housing. If the process temperature is high, the ambient temperature will need to be lower to account for heat transferred to the transmitter housing.

(1) Reference conditions are 70 °F (21 °C), transmit rate of once per minute, and routing data for three additional network devices.

Electromagnetic Compatibility (EMC)

All models

Meets all relevant requirements of EN 61326-2-3:2006

Wireless output specifications

Acoustic output

0 to 255 counts

Temperature output

-40 to 260 °C (-40 to 500 °F)
Product Certifications

European Union Directive Information

A copy of the EC Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EC Declaration of Conformity can be found at www.rosemount.com.

Telecommunication Compliance

All wireless devices require certification to ensure that they adhere to regulations regarding the use of the RF spectrum. Nearly every country requires this type of product certification. Emerson is working with governmental agencies around the world to supply fully compliant products and remove the risk of violating country directives or laws governing wireless device usage.

FCC and IC

This device complies with Part 15 of the FCC Rules. Operation is subject to the following conditions: This device may not cause harmful interference. This device must accept any interference received, including interference that may cause undesired operation. This device must be installed to ensure a minimum antenna separation distance of 20 cm from all persons.

Ordinary Location Certification for FM Approvals

As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by FM Approvals, a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

Installing in North America

The US National Electrical Code (NEC) and the Canadian Electrical Code (CEC) permit the use of Division marked equipment in Zones and Zone marked equipment in Divisions. The markings must be suitable for the area classification, gas, and temperature class. This information is clearly defined in the respective codes.

USA

I5  FM Intrinsic Safety (IS) and Nonincendive (NI)
Certificate: 3043245
Markings: IS Cl I, DIV 1, GP A, B, C, D T4; CL 1, Zone 0 AEx ia IIC T4;
T4(-40 °C ≤ Ts ≤ +70 °C) when installed per Rosemount drawing 00708-1000; Type 4X

Special Conditions for Safe Use (X):
1. The 708 Wireless acoustic Transmitter shall only be used with the 701PGNKF Rosemount SmartPower Battery Pack.

Canada
