

**Bridge the Real-Time to Transactional Worlds:**

# Sync With Syncade™

A Utility to help expand the power of  
Emerson's Syncade™ Smart Operations Management Suite

**New! Version 2.0**  
**Now supporting bidirectional syncs!**

- Runs as a Window's service
- Simple configuration interface
- Trigger ET events for state changes and workflow activation
- Integrate process events with procedural workflow to handle, for example, Alarm Response Procedures (ARP)
- **New in Version 2.0 – bidirectional syncs allow ET event state changes to trigger OPC parameter writes**

### Introduction

The power and flexibility of Emerson Process Management's Syncade™ Smart Operations Management Suite make it one of the top MES platforms on the market today.

Installed on your automation system, Sync With Syncade™ monitors process event triggers like alarms

and links them to Events within Syncade's™ Equipment Tracking (ET) module.

Event state changes in ET can now be monitored in Sync With Syncade™, triggering writes to automation platform parameters.

Link management couldn't be easier – a built in interface to the Sync With Syncade™ service allows for simple configuration.

### Benefits

**Configurable.** Easily make changes and additions as necessary, all managed from a single, intuitive interface.

**Automation platform neutral.** Sync With Syncade™ can be loaded on any control system's OPC server computer.

**Secure.** Sync With Syncade™ monitors the web service call and can alert the automation platform, via OPC, when a connection can't be made.
